Liver Fibrosis Assessment**

Test	Date	Result
FibroScan		
Other (eg. APRI)		

APRI: <http://www.hepatitisc.uw.edu/page/clinical-calculators/apri>

** People with liver stiffness on FibroScan of ≥ 12.5 kPa or an APRI score ≥ 1.0 may have cirrhosis and should be referred to a specialist.

Treatment Choice

I plan to prescribe (*please select one*):

Regimen	Duration	Genotypes
Sofosbuvir + Velpatasvir	12 weeks <input type="checkbox"/>	1, 2, 3, 4, 5, 6
Glecaprevir + Pibrentasvir	8 weeks <input type="checkbox"/> <i>No cirrhosis</i>	1, 2, 3, 4, 5, 6
	12 weeks <input type="checkbox"/> <i>Cirrhosis</i>	
Elbasvir + Grazoprevir	12 weeks <input type="checkbox"/>	1 or 4
Sofosbuvir + Ledipasvir	8 weeks <input type="checkbox"/> <i>No cirrhosis, treatment-naive</i>	1
	12 weeks <input type="checkbox"/>	

Multiple regimens are available for the treatment of chronic HCV. Factors to consider include HCV genotype, cirrhosis status, prior interferon treatment, viral load, potential drug–drug interactions and comorbidities.

See *Australian Recommendations for the Management of Hepatitis C Virus Infection: A Consensus Statement (September 2018)* (<http://www.gesa.org.au>) for all regimens, and for monitoring recommendations.

Patients must be tested for HCV RNA at least 12 weeks after completing treatment to determine outcome. Please notify the specialist below of the Week 12 post-treatment result.

Patients who relapse after direct-acting antiviral therapy should be referred to a specialist for retreatment.

Declaration by General Practitioner/Nurse Practitioner

I declare all of the information provided above is true and correct.
